Figure 2. Bode plot for a zero ( $j\omega$ ) at the origin: (a) magnitude plot, (b) phase plot. A decade is an interval between two frequencies with a ratio of 10; e.g., between  $\omega_0$  and  $10\omega_0$ , or between 10 and 100 Hz. Thus, 20 dB/decade means that the magnitude changes 20 dB whenever the frequency changes tenfold or one decade. The Bode plots for the pole ( $j\omega$ )  $-1$  are similar except that the slope

In this case, the phase plot is having phase angle of 0 degrees up to  $\omega = \frac{1}{\tau}$  rad/sec and from here, it is having phase angle of 90°. This Bode plot is called the asymptotic Bode plot. As the magnitude and the phase plots are represented with straight lines, the Exact Bode plots resemble the asymptotic Bode plots.

Bode Plots (example #2) Sketch the Bode plots for the following transfer function:  $H(s) = \frac{0.1(s+1)}{s^2(s+10)}$  Rewrite the expression in a recognizable form for zeros and poles: We recognize that the transfer function contains a repeated pole at the origin a simple zero and a simple pole.

A Bode Plot is a useful tool that shows the gain and phase response of a given LTI system for different frequencies. Bode Plots are generally used with the Fourier Transform of a given system. An example of a Bode magnitude and phase plot set. The Magnitude plot is typically on the top, and the Phase plot is typically on the bottom of the set.

HANDOUT E.17 - EXAMPLES ON BODE PLOTS OF FIRST AND SECOND ORDER SYSTEMS. Example 1. Obtain the Bode plot of the system given by the transfer function  $2/1/1/()$   $+ = . s G s$ . We convert the transfer function in the following format by substituting  $s = j\omega$   $2/1/1/()$   $+ = \omega \omega. j G j$ . (1) We call  $2/1/\omega =$ , the break point.

Bode Plots Page 1 BODE PLOTS A Bode plot is a standard format for plotting frequency response of LTI systems. Becoming familiar with this format is useful because: 1. It is a standard format, so using that format facilitates communication between engineers. 2. Many common system behaviors produce simple shapes (e.g. straight lines) on a Bode plot,

Example 1. This function has . a constant of 6, a zero at  $s=-10$ , and complex conjugate poles at the roots of  $s^2 + 3s + 50$ .; The complex conjugate poles are at  $s = -1.5 \pm j6.9$  (where  $j = \sqrt{-1}$ ). A more common (and useful for our purposes) way to express this is to use the standard notation for a second order polynomial
